

— WHY INSPECT YOUR RACKS? —

RACK INSPECTION SERVICE

IN THE U.S., THE LAW STIPULATES THAT COMPANY MANAGEMENT IS RESPONSIBLE FOR PROVIDING A SAFE WORKPLACE FOR THEIR EMPLOYEES.

PUTTING WORKERS AT RISK OF INJURY CAN EXPOSE EMPLOYERS TO SERIOUS LIABILITY IN THE EVENT OF AN ACCIDENT.

Despite the demands of your daily operations, it's critical that your racking systems maintain their full integrity. Our pallet rack inspection service is thorough, and performed by a Mazzella expert, to certify that your racking systems comply with rack design and safety standards.

PREPARING FOR OSHA CERTIFICATION

A thorough third-party inspection is highly recommended before starting an OSHA certification process. The inspection report will provide your business with an accurate assessment of the condition of your warehouse pallet racking systems (proper installation, unsafe modification, missing fasteners, unposted capacity, etc.) and allow for necessary measures to be taken to address issues before your OSHA visit.

If your warehouse does not comply with OSHA regulations, you could be fined or forced to suspend your operations temporarily.

INSPECTORS REVIEW:

- Structural Integrity
- Product Application
- Rack Loading
- Missing Components
- Fasteners
- Modifications

SERVICES PROVIDED:

Annual Rack Inspections

With decades of material handling experience, we offer detailed inspection reports outlining found issues, as well as our recommendations.

Engineered Drawings / Capacity Ratings

Stamped engineered drawings and certified capacity ratings are available in addition to our standard inspection service.

WHEN TO INSPECT YOUR RACKS:

- New Rack Installation
- Compliance Review
- Collapse or Damage
- Regulatory Audit
- Safety Initiative
- Safety Optimization
- Reconfiguration Review
- Incomplete Documentation
